LACQUER PROTECTION RENOLIT ALKORPLAN 2010 & 3010

RENOLIT has developed a unique acrylic topcoat that provides excellent protection to single coloured and printed vinyl liners. It's the only vinyl liner that presents such a complete set of features at such low cost.

It provides resistance to:

- Abrasions
- Scratching
- Staining
- UV rays
- Discolouration

This results in:

- The water line being easy to clean
- Standing up to the test of time.

RENOLIT ALKORPLAN 3010 printed liners are the first to apply an environmentally friendly reverse lacquer for protection against the formation of stains from micro-organisms.

This varnish avoids having to use an extra fungicide in the membrane.

It protects the material against aging and preserves the beauty of the swimming pool liner.

Test results showing the advantages of the protective coating system:

Without protective coating						
	Abrasions	Scratches	Stains	UV Rays	Bacteria & Fungi	
With protective coating						

Liner printed RENOLIT ALKORPLAN 3010

Range of printed vinyl liners with protective lacquer for excellent resistance to aging due to UV from the sun, abrasion and microorganisms. Available in width 210 cm.
